AquaMonitor Pro

Water Dataset Potability & Drinking Safety Assessment Report

WHO Guidelines & BIS IS 10500:2012 Certified Protocol

Evaluated: 28/10/2026, 4:01:09 pm

Dataset: Water_Creek_Batch.csv

Account Plan: FREE

1. Dataset Potability & Drinkability Assessment

Automated evaluation of 1 telemetry records analyzed against mandatory drinking water permissible safety thresholds.

DRINKABLE — SAFE FOR HUMAN CONSUMPTION

Overall Drinking Safety Score: 88% • Analyzed: 1 Samples

Safe to Drink: 1 (100%) | Action / Filter Required: 0 (0%) | Critical Unsafe: 0 (0%)

2. Regulatory Drinking Water Conditions (WHO & BIS IS 10500)

Parameter	Unit	Acceptable Limit	Permissible Limit	Health Significance
pH Value	—	6.5 – 8.5	No relaxation	Acidic leads to pipe corrosion; alkaline causes bitter taste
Turbidity	NTU	1.0 max	5.0 max	Shields pathogens; high levels compromise disinfection
Total Dissolved Solids (TDS)	mg/L	300 max	500 max	Palatability, gastrointestinal irritation (>1000)
Dissolved Oxygen (DO)	mg/L	>= 6.5	>= 5.0 min	Organic matter indicator; low DO indicates biological hazard
Electrical Conductivity	µS/cm	100 – 500	800 max	Total dissolved ionic salt mineralization
Temperature	°C	10 – 20	25 max	Palatability & biological growth rate

3. Treatment & Purification Recommendations

- Coagulation, flocculation, and rapid sand filtration to eliminate particulate turbidity.
- Secondary Reverse Osmosis (RO) filtration if Total Dissolved Solids exceed 500 ppm.
- Final stage Disinfection: UV irradiation or routine chlorination (0.2 ppm residual) to ensure microbiological safety.

AquaMonitor Pro — Dataset Telemetry Audit Table

Dataset: Water_Creek_Batch.csv | Total: 1 Samples

#	Sample ID / Loc	pH	Turb(NTU)	Temp(°C)	DO(mg/L)	TDS(ppm)	Safety %	Drinkable Verdict
1	S1	7.2	2.1	22.0	7.5	220	95%	Safe to Drink
